

Package ‘EBGLIDE’

September 22, 2026

Version 0.0.11

Date 2026-02-19

Title Testing Significance of Topological Loops and Voids

Description The method of topological data analysis uses persistent homology to discover interesting topological structures (including loops and voids) from “point cloud” data sets. One of the statistical challenges is to distinguish transient noise from long-lasting biologically meaningful structure. EBGLIDE provides tools to help solve this problem.

Depends R (≥ 3.5)

Imports methods, graphics, stats, TDA, splines, fitdistrplus

Suggests knitr, rmarkdown

License Artistic-2.0

URL <http://oompa.r-forge.r-project.org/>

VignetteBuilder knitr

NeedsCompilation no
